

The Tranquil Otter
United Kingdom, the Lough, Thurstonfield, Cumbria, CA5 6HB.
<http://www.thetranquilotter.co.uk/>

The Tranquil Otter commissioned Coversys in 2014 to provide a secure, attractive, durable and environmentally friendly roof covering. Their requirements for their luxury log cabins lodges were that the roof covering should be lightweight, high-performance and require little or no maintenance. These criteria were easily fulfilled using Coversys steel roof tiles.

The lodges are in a natural forest environment and under trees so it was important that the steel tile finish was not granular, which would have encouraged the growth of moss and lichen. Our plain tiles (self-cleaning) were the right product for these lodges.

Following receipt of the Architect's drawings Coversys proposed a marginal change to the slope of the roof to ensure that full tiles could be used to avoid cutting, this also offered savings on the programme. Following the first order the Client has completed three new lodges with Coversys steel tiles.

Roofing installation carried out by experienced roofing contractor W. M. Turk & Son (<http://www.roofercarlisle.co.uk/index.html>)

6 million Coversys steel roof tiles covering approximately 3 million square metres of roof area have been installed in 27 countries.
